The Business End of Printing

Serious business calls for serious print solutions. Business printers offer more than just sharp output; they drive efficiency, reduce running costs, and keep your operations seamless.

Print like a pro, every time.

The best printer is the one you don't notice

Printers have played a vital role in offices for years, efficiently managing paperwork and handling administrative tasks with ease. But have you ever stopped to think about the printer itself? Most of us don't give this piece of equipment a second thought once we've hit the "Print" button, but it's essential that printers are optimised to become part of your workflow. Otherwise, these devices can cause delays and frustration.

The importance of a smooth printing experience

A printer or multi-function printer can easily become a thorn in the side of office workers. The biggest issue is when you need to print a document, and the printer isn't working. This can be a real productivity killer, causing delays and a frustrating experience for employees.

For this reason, a printer that's noticed is not necessarily a good thing. The best type of printer is the one that operates smoothly and without error. This will bring confidence and efficiency in your workflow.

Essentially, there are two situations at work when you notice your printer:

- When you're using it
- When it's not working

In the office, we have daily routines to prioritise our work and workflow systems to meet our deadlines; the hyper-organised will even allow time for the unexpected on each task or project. The printer you notice the most is the one that's a disruption to your routines and workflows because it's not working for one reason or another; you then have to invest time in fixing it, time in which could have gone into hitting that deadline.

Choosing the right printer

The printer you choose should be able to handle the volume of documents your office produces each day. There's nothing more frustrating than having to wait for a slow printer to churn out documents. This can be a real drain on productivity, particularly in a busy office where time is precious.

Look for a printer that can cope with your print demands and that prints documents quickly without sacrificing quality. Another factor to consider is the type of printer that's best suited for your needs.

There are several different types of printers available, including inkjet, colour laser, and mono laser.

Consider what your office requires in terms of printing speed, paper handling, and colour quality, and find a printer that fits those needs. A high-quality printer means your employees will spend less time troubleshooting issues and more time working on the projects that matter.

Quick tips for smarter ways to print & scan | Brother Australia

Why reliability is a crucial consideration

The printer you notice the least is the one that seamlessly integrates into your workflow, effortlessly functioning when you need it the most.

Looking for dependable printers can be difficult, often because dependability and reliability are hard to measure. The best sources for reference to make the most informed decision are from third-party testing and reviews by professionals who have assessed the features and stress tested the device.

Brother has won PC Mag's Business Choice Award in relation to reliability and satisfaction for business users. As noted by PC Mag, Brother printers scored top marks for reliability, ease of use, paper handling and copier functions.

In a busy work environment, the last thing you need is a printer that causes interruptions or issues. That's why the best printer is the one you don't even notice - it simply works seamlessly in the background, allowing you to focus on your work without any distractions. ■

**For consistent, high quality results,
choose genuine Brother Ink and Toner.**

Inkjet vs laser: Which printer is right for you?

If you're in the market for a new printer, you're likely wondering whether you should select an inkjet or laser device. The short answer? It depends...

Choosing between an inkjet and laser printer comes down to knowing what you're primarily printing.

That's because purchasing the wrong type of printer can waste time, money and resources - not to mention unnecessary frustration.

What is the difference between inkjet and laser printers?

There are two main types of printers that most people are familiar with: inkjet and laser. While both have their advantages and disadvantages, the difference between inkjet and laser printers is significant. Inkjet printers use liquid that is sprayed through microscopic nozzles onto the page, while laser printers use toner powder that is heated and fused to the paper.

Brother MFC-J6940DW A3 Inkjet Multi-Function Printer 2753430

Brother HL-L6210DW Mono Laser Printer 3039449

The fundamental difference affects everything from print quality and speed to cost and maintenance. Whether you're a casual user or heavy-duty office professional, understanding the differences between these two printing technologies is essential to making the right choice for your needs.

Laser printer vs inkjet printer: Key considerations

When it comes to choosing between a laser printer or an inkjet printer, there are several key factors that should be taken into account. Here are six printing attributes to consider:

Paper type and size: Most printers support a range of paper types and sizes, but knowing which you'll be printing most often can narrow your choices down to the optimal device.

Approximate number of pages printed per month: Both inkjet and laser printers offer high-yield cartridge options, but selecting your device will depend on your monthly print volume as well as the type of print jobs you need completed.

Print quality: Though both produce crisp text and imagery, inkjet and laser may differ slightly depending on what you print and what type of paper you print it on.

Print speed: To the naked eye, there are minimal differences between inkjet and laser in terms of print speed, but every second counts when it comes to business productivity.

Price: Brother offers a wide range of inkjet and laser printers at affordable prices, catering to every budget.

Organisation at your fingertips

Quick, easy-to-use labelling machines that help you keep track of everything that matters.

7 Signs Your Business Needs a Label Printer

1. You're still manually printing and cutting labels

Manual labelling is time-consuming, prone to mistakes, and costly in the long run. As your business grows, the burden increases—taking up staff time and reducing productivity. A label printer automates the process, reducing errors and allowing you to produce consistent, professional labels with ease.

2. Your labels are inconsistent or unclear

Whether it's product, inventory, or shipping labels, inconsistency in size, clarity, or layout can lead to confusion, delivery delays, and a less professional image. A label printer helps maintain uniformity and ensures all labels meet internal or external standards—especially important when dealing with third-party logistics or retail compliance.

3. You're struggling to keep up with growing demand

In high-volume environments, speed and accuracy are key. Relying on manual labelling slows operations and increases the risk of errors. A label printer helps streamline workflows, keeping pace with order volume and allowing your team to work faster with fewer mistakes.

4. Your current system lacks flexibility and control

If your existing labelling setup doesn't allow for easy customisation—such as adding barcodes, tracking numbers, or branding—it may be holding your operations back. A dedicated label printer gives you control over label design, size, and information, tailored to your exact needs.

5. Label quality is affecting your brand

Poorly printed or handwritten labels can undermine your brand and create issues with scanning or delivery. Label printers deliver sharp, accurate labels that improve presentation, scanning reliability, and overall professionalism—whether for customer parcels or internal stock control.

**DYMO LabelWriter 550
Label Printer**

2571854

**6. You're experiencing customer complaints
or delivery issues**

An increase in errors like incorrect deliveries, missing items, or mislabelled products can result in dissatisfied customers. Label printers reduce the risk of human error, help maintain accuracy, and support clearer inventory tracking—leading to faster fulfilment and fewer complaints.

**7. Your shipping carriers have strict labelling
requirements**

Many carriers have specific label format and barcode standards.

Non-compliant labels can delay deliveries or even lead to rejected parcels. A label printer ensures your labels meet these specifications, helping avoid costly disruptions and supporting smoother shipping processes. ■

Presentation-Ready, Every Time

From everyday reports to important meetings, binding machines help you deliver documents that look as sharp as your ideas.

When you need to impress a client or boss, your corporate materials – displays, booklets, etc. – need to look their absolute best. Binding is a quick and cost-efficient way to make an immediate and lasting impression, but there are many styles available. Rest assured, we know binding inside and out. Read to learn about binding styles, their benefits, and best use cases.

Style 1: Comb Binding

Often called “plastic binding” or “spiral comb binding,” comb binding is the most recognizable choice in binding. First, documents are punched. Then they’re bound together using a spine with tabs that roll into the spine itself. In schools and large businesses alike, comb binders are great for when numerous booklets need to be created for a class, meeting or training session.

Style 2: Coil Binding

Coil binding provides a quick continuous loop that stretches the length of the document. Unlike other forms of binding, this one allows 360-degree page turning. Add class and color with GBC’s ColorCoil —a quick and efficient way to take your document to the next level.

Style 3: ProClick Binding

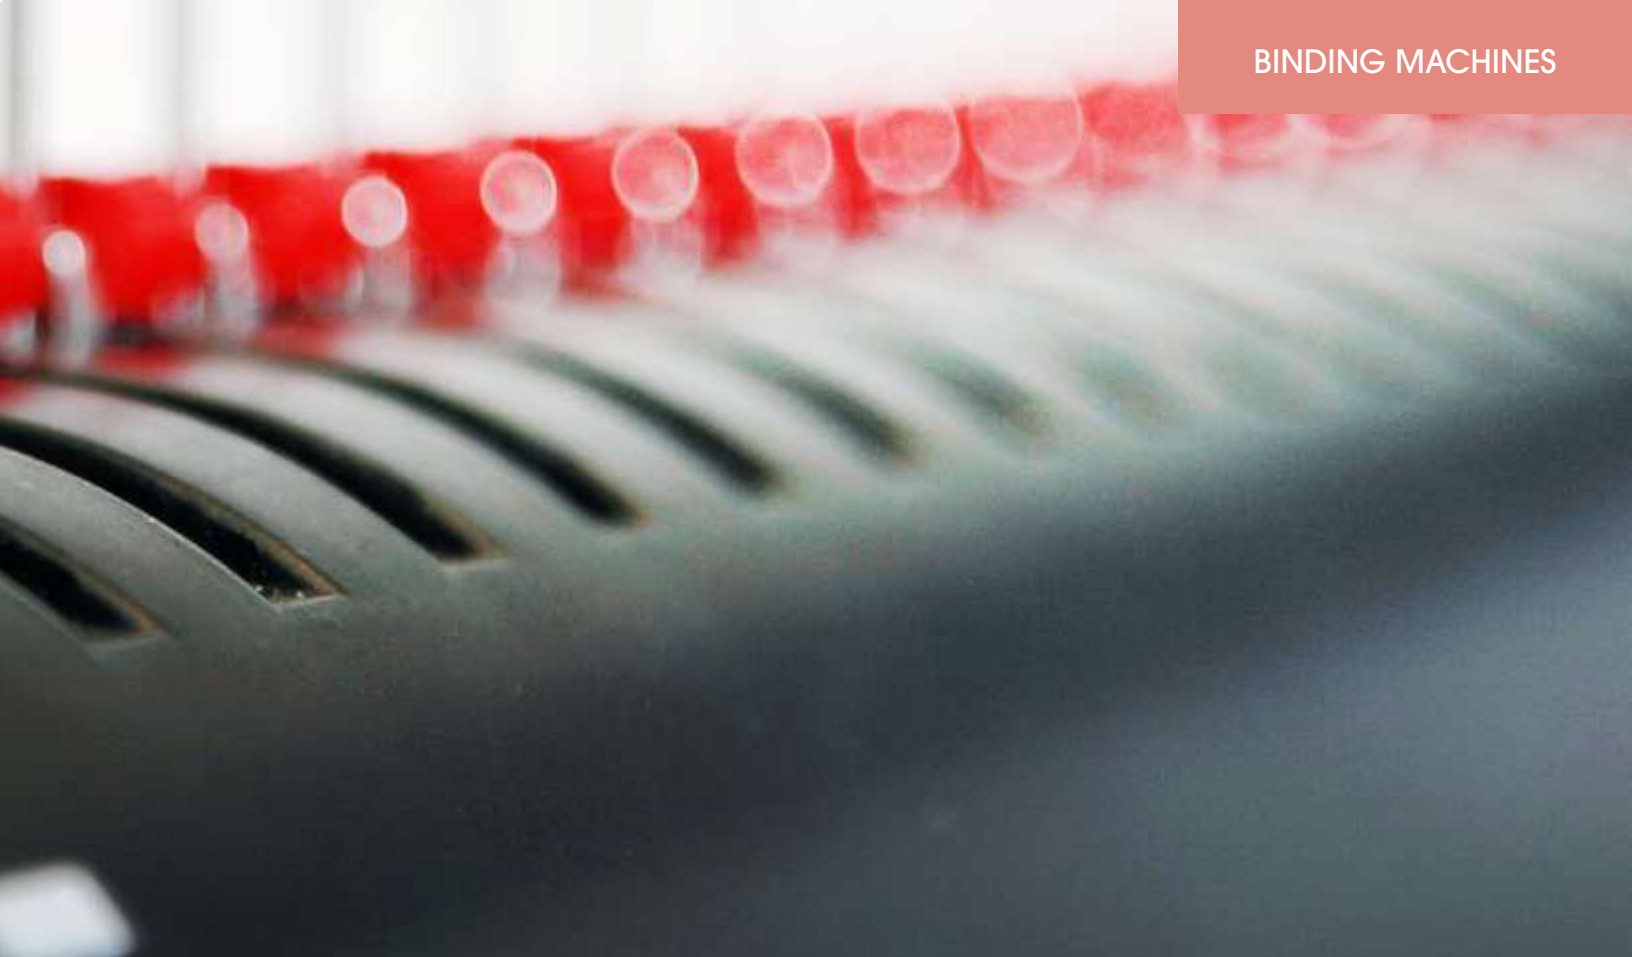

GBC’s unique, patented ProClick Binding works much like comb binding, with one big exception. Rather than individual tabs that curl into the spine, the bind ‘clicks’ together, securing papers in place. Beyond its upscale look, ProClick lets you add and remove pages in a snap.

Style 4: Wire Binding

Wire binding take a C-shaped binding spine and closes around your punched papers. This style is similar in concept to the wire bound notebook or notepads that are essential on college campuses. Wires are measured by pitch 3:1 (3 holes per inch on the paper edge) and 2:1 (2 holes per inch on the paper edge).

Style 5: VeloBind

VeloBind – also known as “strip binding” – is the professional way to bind large volumes of documents up to 750 sheets. VeloBind strips secure documents fast and are cut and welded to the element on the underside of your book, creating a tamper-proof seal. Beyond its professional look, VeloBind provides the highest security of all binding styles, preventing the removal or insertion of pages. ■
